DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Albrecht et

al. [DE 42 30 939] in view of Turner [US 6,064,191]

Albrecht et al. discloses a current transformer [see figure] comprising :

- a primary winding [4] ;
- a core [2] having an air gap;
- a Hall sensor [11] disposed in the air gap;
- a secondary/compensation winding [5] wound about the core;
- additional winding [14];
- evaluation circuit [17]; and
- AC and DC source.

Albrecht et al. discloses the instant claimed invention except for the evaluation circuit including an integration circuit to supply an integrated current value to the evaluation circuit.

Turner discloses a current monitoring method for a current transducer using an integrator [14] to integrate the secondary output to provide a measurement of the current in the primary and using the value to control current switching and compensation [figure 4].

Art Unit: 2832

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the integration circuit design of Turner with the evaluation circuit of Albrecht et al. for the purpose of providing measurement of current at low frequency.

Regarding claims 1-3 and 9, the claimed method steps would necessitate by the apparatus shown by Albrecht et al.

Claims 7-8 and 11-12, the specific type of sensor use for the magnetic field sensor would have been an obvious design consideration based on the intended application use.

Response to Arguments

Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
